ATL303Z_1D00_CHECKLIST_AUTOMATION

Purpose:

This job group contains alerts that ensure we on Atlas Ops are doing our due diligence to make sure we process insurance claims. There are two types of claims: paper and electronic.

In some steps, this job runs a check on the important environments and prerequisites needed for COPS jobs.

Business Impact:

Internal checklist to ensure claims are properly accounted for.

General Info:

Priority	1
Process location	EDINET1P
Calendar	Daily
Scheduled Start Time	6:00AM
SLA	Resolve failed job steps ASAP
Internal Notifications - Initial	N/A
Customer Notification - Secondary	See step failure instructions
Broadcast distribution list - Final	N/A

Process:

N/A

Accesses needed:

EDINET1P

Technology used:

File Explorer

Microsoft SQL Server

Tidal Agents used:

AGP_VAB_SQL
FaFsaSvrProdStandard
US_VAB_SQL
VA22PWVISS315

Prerequisites

6:00AM

Failure Instructions:

Steps	Explanation and Details	Failure Instruction
`ATL303Z_0002_CLAIM_COUNT_SANITY_CHECK`	**Explanation of job step:** This step checks the claim count loaded into PEGA, at least 200k for Sat or Mon, at least 250K for Tue-Fri. If there are less than that claim count, then the step fails. **Dependency:** 6:00 AM Monday - Saturday **Command:** osql	**ATL303Z_0002_CLAIM_COUNT_SANITY_CHECK** will fail if the Output contains the value "Claims are not good". **Once you perform your initial search and any necessary actions have been taken, set job step to `Completed Normally`.** The job will fail if we have not loaded over 250,000 claims (200k for Saturday or Monday). Since claims processing (which primarily is controlled by CLA303D) usually loads and processes claims at around 80k claims per hour, before pursuing further investigation as described below, first check if claims processing (CLA303A) started late. This can often be the main reason this job fails since the system has not had enough time to reasonably get to the set threshold for this alert, even if it is processing claims at a reasonable, normal rate: • **For Tuesday-Friday and Sunday**: If claims processing started (refer to CLA303A start time) at least 3.5 hours prior to this job failure, perform below checks, Otherwise, simply set the job to `Completed Normally`. • **For Saturday and Monday**: If claims processing started (refer to CLA303A start time) at least 3 hours prior to this job failure, perform below checks. Otherwise, simply set the job to `Completed Normally`. So, you will need to check from multiple difference sources (OTVM, Axway, Pega Dashboard, etc.) to see where the problem is to cause not having enough claims loaded. 1. Check the PEGA staging folder in Prod \\VA22PWVISS315.corp.agp.ads\POSTOFFICE\837_IN\OTHER\Staging to see if files are available to be loaded. 2. If there are X12 files currently in the folder, set the job step to completed normally and keep an eye on the claim counts in PEGA to make sure claims are loading.

	Procedure: /c -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "USE EDINETCLAIM DECLARE @TODAY DATETIME = GETDATE() SELECT CASE WHEN DATENAME(DW,@TODAY) in ('Saturday','Monday') THEN CASE WHEN TotalClaimsLoaded > '200000' THEN 'Claims are good' ELSE 'Claims are not good' END ELSE CASE WHEN TotalClaimsLoaded > '250000' THEN 'Claims are good' ELSE 'Claims are not good' END END as 'Claim Status' FROM EDINETCLAIM.dbo.vDailyRollup (NOLOCK) "	3. If there are no files in staging, check to see if we are still receiving files. Call the COPS on call. Once they have responded, and give the go ahead, set the job step to completed normally
`ATL303Z_0003_DISK_SPACE_CHECK`	**Explanation of job step:** Alert is triggered when D: drive space is less than 22GB - Daily in the server: Va22pwviss315. **Dependency:** N/A **Command:** cscript.exe **Procedure:** //Nologo AGPFreeSpace.vbs D: 8	1. Call L1 CIFT/PEGA On-call. https://confluence.elevancehealth.com/display/GCA/calendar/673ae5e0-893f-4a43-b465-faceb4e3bbae?calendarName=CIRT%20On-Call 2. Email CIFT so they can begin moving/archiving files. 3. Then set step to `completed normally` **Notes about this job** Regarding the server this job uses: it is used for file storage, and we archive files in this server for a certain duration. This alert is to ensure that the server does not run out of space. Reach out to Grace if at all this alert fires.

<table>
<tr>
<td>ATL303Z_0004_Check for unacknowledged paper claims</td>
<td>

Explanation of job step:

This step checks for paper claims that were sent to Conduent for them process. Conduent has 24 hours to send an acknowledgement saying that they received the claims.

Dependency:

ATL303Z_0003_DISK_SPACE_CHECK(1) = Completed Normally

Command:

osql

Procedure:

/c -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "USE EDINETCLAIM select CASE WHEN COUNT(*) > 0 THEN 'Y' ELSE 'N' END AS T from (select distinct batch_id from EDINETCLAIM.dbo.ScanClmTracking ct (nolock) where ct.current_loc in ('10') and isnull(ct.agp_ack_date, '') = '' and inserted_date between '2013-01-01 00:00:00.000' and CONVERT(varchar(10), GETDATE(),112)) a "

</td>
<td>

Once you complete the below troubleshooting, set the step to **`Completed Normally`**

Run this query on ZPLTAGLIS-EDINET1P.US.AD.WELLPOINT.COM,40030 to find the batches that are unacknowledged:
Unacknowledged Batches

```
SELECT DISTINCT BATCH_ID
FROM EDINETCLAIM.DBO.SCANCLMTRACKING (NOLOCK)
WHERE CURRENT_LOC = '10' AND ISNULL(AGP_ACK_DATE, '') = ''
    AND INSERTED_DATE BETWEEN '2013-01-01 00:00:00.000' AND CONVERT(VARCHAR(10),
GETDATE(),112)
ORDER BY BATCH_ID
```

Then run this query to get more information on the batches:
Info on Batches

```
SELECT *
FROM EDINETCLAIM..ScanClmTracking (NOLOCK)
WHERE BATCH_ID IN ('') -- Put batch_ids from previous query
```

From the query above, check Vendor_ACK_Date. If it is NULL, then we did not process an acknowledgement.

Check this file path to see if we have the file; the name corresponds to the batchID name:

\\VA22PWVISS315.corp.agp.ads\TransferFiles\Conduent\ACK_IN

1. If the file is in that file path, then you need CLA997A/C to complete, and the acknowledgement will process in SQL.
2. If there is no file in that file path for that batchID, you need to email Conduent using the below message
   a. GBD has Unacknowledged Image Batches for images - MMDDCCYY (Today's date).msg

> If you get a reply back saying that they resent the acknowledgements and to check, you can either:
>
> i. Run the first query again to see if they have been processed (resultset would be blank)
> 1. if results look the same, wait again for CLA997A/C to complete, then rerun the query again.
>
> ii. Look in the file path above, and you should see filenames that match the DCN.
>
> **If we received the acknowledgements, reply back letting them know that we have received them.**

ONCE YOU HAVE DONE ALL OF THIS, SET THE JOB STEP TO `Completed Normally`. YOU DO NOT NEED TO WAIT FOR A RESPONSE FROM CONDUENT.

However, if you do get a response with them asking us to validate, simplest way to do so is to rerun the first query and ensure no batch IDs populate.

</td>
</tr>
<tr>
<td>ATL303Z_0005_Check for outstanding paper claims</td>
<td>

Explanation of job step:

This job step checks for aging Paper claims. Conduent typically has 4 days to process the paper claims, either as an 837 or a rejection (xml file). This job checks for Paper claims that missed SLA from Conduent.

</td>
<td>

Please send an email to DL-GBDIT-COPS and then set the step to **`Completed Normally`**

</td>
</tr>
</table>

	Dependency: **Command:** osql **Procedure:** /c -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "USE EDINETCLAIM SELECT CASE WHEN COUNT(1) > 0 THEN 'Y' ELSE 'N' END FROM EDINETCLAIM.dbo.ScanClmTracking ct (NOLOCK) WHERE ct.Current_Loc IN ('25', '20','10') AND ISNULL(ct.AGP_ACK_Date, '') = '' AND Inserted_Date BETWEEN '20130101' AND CONVERT(DATE, DATEADD(DAY, - CASE WHEN DATEPART (WEEKDAY, GETDATE()) = 1 THEN 1 WHEN DATEPART (WEEKDAY, GETDATE()) IN (2, 3, 4, 5) THEN 6 WHEN DATEPART (WEEKDAY, GETDATE()) IN (6, 7) THEN 4 END , GETDATE())) "	
ATL303Z_0006_SANITY_CHECK_FOR_CCOP	**Explanation of job step:** This job will fail if there are any claims stuck in CCOP or if the claim status was not updated in EDINET from CCOP for more than 10 days.	**ATL303Z_0006_SANITY_CHECK_FOR_CCOP** Please send an email to DL-GBDIT-COPS and set the step to Completed Normally.

	Dependency: 6:00 AM ATL303Z_0005_Check for outstanding paper claims = Completed Normally	
	Command: osql	
	Procedure: /c -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "USE EDINETCLAIM SELECT CASE WHEN EXISTS (SELECT 'X' FROM EDINETCLAIM.dbo.T837CLAIMSTATUS CS (NOLOCK) JOIN EDINETCLAIM.DBO.T837CLAIMINFO CI (NOLOCK) ON CI.CLMINFOID = CS.CLMINFOID WHERE CS.INSERTDATE BETWEEN '2022-01-01 00:00:00' AND CONVERT (VARCHAR(10), GETDATE()-1, 112) AND CS.CLMROUTINGFLAG LIKE 'S%' AND DATEDIFF(DAY, CS.INSERTDATE, GETDATE())>10) THEN 'Y' ELSE 'N' END AS 'IS_CLAIM_GOT_STUCK'"	
`ATL303Z_0012A_Daily_Kofax_Check_PROD`	**Explanation of job step:** Alert when Kofax folder has an older folder.	Once you complete the below troubleshooting, set the step to **`Completed Normally`** • **Action**: Verify that the following paths contain no folders from the previous day for paths below. After the check is completed, you can initial for the matching line and date in the spreadsheet for the checklist tab. • **Explanation:** To make sure no batches are stuck on the scanner that may need to be reviewed and possible fixed by the appropriate team. Sometimes the batches are empty or missing needed files that may need either deleted or re-scanned by the proper team. \\va01pstodfs003.corp.agp.ads\apps\Global\Kofax\KC_ImageFS\Claims\PROD \\va01pstodfs003.corp.agp.ads\apps\Global\Kofax\KC_ImageFS\Claims\PROD\staging ⚠ **File Path Access** If you do not have access to the above paths. You will need to place request to get RWD access to the location: https://kanbanflow.com/t/u1cZ3Bbb ⚠ **No folder for previous date**
	Dependency: 7:00 AM	
	Command: D:\AGP\APPS\TIDAL\SCRIPTS\folderSort.exe	
	Procedure: \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD\	

If there is no folder found for previous dates in either of the folders, then no action is needed beyond setting the step to Completed Normally.

Empty Folder Steps:

- If there is a folder with an older date and it is empty, send an email to Kofax and ask them to look into look into this folder and provide an update.
- Email to use: Empty Non-V2V Folder Dated MMDDCCYY.msg

Folder Without Images Steps:

- If there are no image files in the folder, copy the zip file with the same name from \\Va22pwviss315\source_hov
- Paste it in \\agpcorp\apps\Global\Macess_Operational_Storage\Prod\FTP\SHOV_Central\From
- Delete the folder from the scanner.

Folder With Only XML File Steps:

- If you check the folder, and there is only an XML and no image files, then run the query below, using the folder name as the **`batch_id`**, to see if they have been rejected:

```
SELECT *
FROM [CLAIMS_RECON].[DBO].[VENDORIMAGETRACKING]
WHERE BATCH_ID = '06132017XENY0619' -- insert folder name
```

- Batch was rejected steps:
  - delete the folder since it was empty of images and rejected in the table.
  - Send email to COPS DL, COPS SME on-call, and Atlas Ops once this has been done including all the details and reasons why.
- Batch was not rejected steps:
  - If the folder contains images, then check if the image is already in ScanClmTracking table by running this query:

```
SELECT *
FROM EDINETCLAIM.DBO.SCANCLMTRACKING (NOLOCK)
WHERE BATCH_ID in ('12072017SHOW0458') --insert folder name
```

  - If the image has already been loaded, then proceed to delete the folder.
  - If the image has not been loaded:

    1. Get the OriginalFileNm for the batch. The batch is the folder name from \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD

       ```
       SELECT REPLACE(ORIGINALFILENM, '.meta', '.zip') AS FILENAME
       FROM CLAIMS_RECON.DBO.VENDORIMAGETRACKING WITH (NOLOCK)
       WHERE BATCH_ID ='<batch>'
       ```

    2. Find the original file in the archive. The archived file will be in \\Va22pwviss315\source_hov or \\Va22pwviss315\xerox depending on if the file is from SOURCE_HOV or XEROX.
    3. Copy the archived file to \\agpcorp\apps\Global\Macess_Operational_Storage\Prod\FTP\SHOV_Central\From\
    4. Delete the original folder in \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD

If files are vendor files like SHOW, SHOC, and XENY and are not rejected, please have COPS SME do the following:

**Verify that the files are vendor files like (SHOW, SHOC and XENY ex… then verify the status: if rejects they can be deleted. If not; check the claim totals with the .xml file and research)

**If xml needs adjusting and once completed: override dependencies on CLA997A_2D00_FTP_OUTBOUND_VENDORS (1)

For adjusting the xml file look for the document number and the page number associated with that document number in the xml file and compare with the batch that got stuck in the \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD and see if it is missing any page number associated with that document number. If any missing edit the xml file by adding the page number to it.

Example: 0033.001, 0033.002,003.003,..

		First part before the (.) is document number and after the (.) is page number. Need to check the xml file to see if all the document numbers has the corresponding page numbers. If it is missing any we need to add the page number as shown below to the respective document number and save the xml file and put it back to the batch folder which is stuck in \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD. When CLA997A runs make sure the batch gets picked up. Sample: </PAGE> <PAGE PageNum="004"> <IMAGEFILE>0033.004</IMAGEFILE> <FILEOFFSET>8</FILEOFFSET> </PAGE> Run the following query to check to see how many claims are in a batch or their reject status: Select * from EDINETCLAIM.dbo.ScanClmTracking (nolock) where batch_id in (' ') If you are not able to delete the batch or have any questions send an email to Tier2 team on-call staff and let them provide direction.

`ATL303Z_0012B_Daily_Kofax_Check_PROD_Staging`	**Explanation of job step:**
	
	Alert when Kofax staging folder has an older folder.
	
	Dependency:
	
	ATL303Z_0012A_Daily_Kofax_Check_PROD(1) = Completed Normally
	
	Command:
	
	D:\AGP\APPS\TIDAL\SCRIPTS\folderSort.exe
		Once you complete the below troubleshooting, set the step to **`Completed Normally`**
		
		• **Action**: Verify that the following paths contain no folders from the previous day for paths below. After the check is completed, you can initial for the matching line and date in the spreadsheet for the checklist tab.
		• **Explanation:** To make sure no batches are stuck on the scanner that may need to be reviewed and possible fixed by the appropriate team. Sometimes the batches are empty or missing needed files that may need either deleted or re-scanned by the proper team.
		
		\\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD
		
		\\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD\staging
		
		File Path Access
		
		If you do not have access to the above paths. You will need to place request to get RWD access to the location: https://kanbanflow.com/t/u1cZ3Bbb
		
		No folder for previous date
		
		If there is no folder found for previous dates in either of the folders, then no action is needed beyond setting the step to Completed Normally.
		
		V2V NOT in Folder Name Steps:
		
		• If there is a folder with an older date and it is empty and **not** a V2V folder, send an email to Kofax and ask them to look into look into this folder and provide an update.
		• Email to use: Empty Non-V2V Folder Dated MMDDCCYY.msg
		
		V2V Folder Without Images Steps:
		
		• If there are V2V (meaning V2V is in the folder name) folders, and there are no image files in the folder, copy the zip file with the same name from \\Va22pwviss315\source_hov
		• Paste it in \\agpcorp\apps\Global\Macess_Operational_Storage\Prod\FTP\SHOV_Central\From
		• Delete the folder from the scanner.
		
		V2V Folder With Only XML Steps:
		
		• If you check the folder, and there is only an XML and no image files, then run the query below, using the folder name as the **`batch_id`**, to see if they have been rejected:
		
		`SELECT *`
		`FROM [CLAIMS_RECON].[DBO].[VENDORIMAGETRACKING]`
		`WHERE BATCH_ID = '06132017XENY0619' -- insert folder name`
		
		• Batch was rejected steps:

Procedure:

\\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD\STAGING\

- delete the folder since it was empty of images and rejected in the table.
- Send email to COPS DL, COPS SME on-call, and Atlas Ops once this has been done including all the details and reasons why.

- Batch was not rejected steps:
  - If the folder contains images, then check if the image is already in ScanClmTracking table by running this query:

```
SELECT *
FROM EDINETCLAIM.DBO.SCANCLMTRACKING (NOLOCK)
WHERE BATCH_ID in ('12072017SHOW0458') --insert folder name
```

  - If the image has already been loaded, then proceed to delete the folder.
  - If the image has not been loaded:

    1. Get the OriginalFileNm for the batch. The batch is the folder name from \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD

```
SELECT REPLACE(ORIGINALFILENM, '.meta', '.zip') AS FILENAME
FROM CLAIMS_RECON.DBO.VENDORIMAGETRACKING WITH (NOLOCK)
WHERE BATCH_ID ='<batch>'
```

    2. Find the original file in the archive. The archived file will be in \\Va22pwviss315\source_hov or \\Va22pwviss315\xerox depending on if the file is from SOURCE_HOV or XEROX.
    3. Copy the archived file to \\agpcorp\apps\Global\Macess_Operational_Storage\Prod\FTP\SHOV_Central\From\
    4. Delete the original folder in \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD

If files are vendor files like SHOW, SHOC, and XENY and are not rejected, please have COPS SME do the following:

**Verify that the files are vendor files like (SHOW, SHOC and XENY ex… then verify the status: if rejects they can be deleted. If not; check the claim totals with the .xml file and research)

**If xml needs adjusting and once completed: override dependencies on CLA997A_2D00_FTP_OUTBOUND_VENDORS (1)

For adjusting the xml file look for the document number and the page number associated with that document number in the xml file and compare with the batch that got stuck in the \\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD and see if it is missing any page number associated with that document number. If any missing edit the xml file by adding the page number to it.

Example: 0033.001, 0033.002,003.003,..

First part before the (.) is document number and after the (.) is page number. Need to check the xml file to see if all the document numbers has the corresponding page numbers. If it is missing any we need to add the page number as shown below to the respective

document number and save the xml file and put it back to the batch folder which is stuck in

\\agpcorp\apps\Global\Kofax\KC_ImageFS\Claims\PROD.

When CLA997A runs make sure the batch gets picked up. Sample:

</PAGE>

<PAGE PageNum="004">

<IMAGEFILE>0033.004</IMAGEFILE>

<FILEOFFSET>8</FILEOFFSET> </PAGE>

Run the following query to check to see how many claims are in a batch or their reject status:

Select * from EDINETCLAIM.dbo.ScanClmTracking (nolock) where batch_id in (' ')

If you are not able to delete the batch or have any questions send an email to Tier2 team on-call staff and let them provide direction.

ATL303Z_0014_SANITY_CHECK_FOR_AXWAY_CONNECTIONS	**Explanation of job step:**
	
	This step validates each inbound Axway connection. The job will fail if we haven't received 837 files from a vendor in the last 30 days,
	
	Dependency:
	
	ATL303Z_0012B_Daily_Kofax_Check_PROD_Staging(1) = Completed Normally
	
	Command:
	
	SQLCMD
	
	Procedure:
	
	/b -S <EDINET_SERVER.3171> -U <APP_EDINETCLAIM_USER.3281> -P <APP_EDINETCLAIM_PWD.3282> -Q "SELECT 'ALERT : VENDOR_ID - """ + ETLS.VENDOR_ID + """ AND LAST FILE RECEIVED DATE - '+CONVERT (VARCHAR,MAX (ETLS.RCD_INSERT_DT), 23) AS 'SANITY_CHECK' FROM EDINETCLAIM_JC.[CIFT].[ETLSOURCEINPUTFILELOG] ETLS JOIN EDINETCLAIM_JC.[CIFT].[ETLVENDORCONFIG] ETLV ON ETLS.VENDOR_ID = ETLV.VENDOR_ID WHERE ETLS.ROUND = 1 AND ETLV.ACTIVE = 'Y' AND ETLV.VENDOR_ID NOT IN ('PPR','KAN','AVA275','WIS','CAMDC','FLS','PPL','CHAUD','CAMTX','CAMTN','VAL', 'CAMCA','CAMIA','WLPPPR') GROUP BY ETLS.VENDOR_ID HAVING MAX (ETLS.RCD_INSERT_DT) < GETDATE()-30"
		Once you complete the below troubleshooting, set the step to **`Completed Normally`**
		
		1. Check the TIDAL OUTPUT FOR FAILED STEP. Example:
		`ALERT : VENDOR_ID - "VAL" AND LAST FILE RECEIVED DATE - 2022-01-04`
		2. Check to see if the same vendor caused this step to fail in the past day (this should be noted on the previous day's Kanban ticket, which should be in Validate).
		a. If so, check that a ticket has been created and an email was sent to GBD Axway Production Support team and that we have received a response.
		i. If we have received a response, Axway has already looked into the issue, and we can set step to completed normally. Add a comment to the previous day's Kanban ticket.
		ii. If we haven't received a response but did create a ticket, reply back to the sent email asking for an update and comment on the previous day's Kanban ticket. Set the step to Completed Normally.
		
		Job didn't previously fail and no ticket has been created steps:
		
		1. Run this query on EDINET1P/EDINETCLAIM_JC
		
		`--This query will give you a file input path and a file specification.`
		`SELECT VENDOR_ID,`
		`FILE_INPUT_PATH,`
		`FILE_SPEC`
		`FROM EDINETCLAIM_JC.[CIFT].[ETLSOURCEINPUTFILECONFIG]`
		`WHERE ROUND= 1`
		`AND VENDOR_ID in ('insert VENDOR_ID from Tidal Output')`
		
		2. Check if a SNOW ticket has already been submitted for the vendor(s) in the Tidal Output (check if previous day's run failed; find the corresponding failure ticket and review work notes). If it did fail, simply follow up on that email. **We do not need multiple tickets for the same issue.**
		3. Create a SNOW ticket with form "GBD Axway File Transfer Automation - MGFT Support".
		a. Request Type: File Status Lookup
		b. File Name and Format: File_Spec from the query
		c. Pickup Location: File_Input_Path from the query
		d. The Delivery Location: Unknown
		e. In the comments, write "We have not received a file from this vendor in at least 30 days. Please check the corresponding inbound connections."
		4. Following below points, send an email to Axway Production Support with SNOW ticket number: ATL303Z_0014 Insert Vendor files Insert ticket Number.msg
		a. Change the subject (add the Vendor name and ticket number)
		b. Change the text in pink
		c. Put your signature
		5. Comment the ticket number on the failure Kanban ticket and move it to the Validate column.
		
		ONCE YOU HAVE DONE ALL OF THIS, SET THE JOB STEP TO `Completed Normally`. YOU DO NOT NEED TO WAIT FOR A RESPONSE TO THE EMAIL
		
		⚠ Ignore VENDOR_ID CHAUD. This is a known issue. Please see comments with screenshot from Joseph.
		
		Ignore vendor PPL as we are not receiving PPL files as much as we use too. Just set job step to completed normally.

ATL303Z_0014A_SANITY_CHECK_FOR_LOOPING_CLAIMS	**Explanation of job step:**
	
	Checks for any claims that are stuck processing (known as looping).
	
	Dependency:
	
	ATL303Z_0014_SANITY_CHECK_FOR_AXWAY_CONNECTIONS(1) = Completed Normally
	
	Command:
	
	SQLCMD
	
	Procedure:
	
	/b -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "USE EDINETCLAIM BEGIN IF OBJECT_ID ('TEMPDB..#TEMP') IS NOT NULL DROP TABLE #TEMP IF OBJECT_ID ('TEMPDB..#TEMP1') IS NOT NULL DROP TABLE #TEMP1 IF OBJECT_ID ('TEMPDB..#LOOP') IS NOT NULL DROP TABLE #LOOP IF OBJECT_ID ('TEMPDB..#HIST') IS NOT NULL DROP TABLE #HIST SELECT CLMINFOID INTO #TEMP FROM EDINETCLAIM.dbo.T837CLAIMSTATUS WHERE CLMROUTINGFLAG = 'PR' AND INSERTDATE< GETDATE()-1
		Once you complete the below troubleshooting, set the step to **`Completed Normally`**
		
		Run this query on EDINET1P:
		
		`USE EDINETCLAIM`
		`BEGIN`
		`IF OBJECT_ID('TEMPDB..#TEMP') IS NOT NULL`
		`DROP TABLE #TEMP`
		`IF OBJECT_ID('TEMPDB..#TEMP1') IS NOT NULL`
		`DROP TABLE #TEMP1`
		`IF OBJECT_ID('TEMPDB..#LOOP') IS NOT NULL`
		`DROP TABLE #LOOP`
		`SELECT CLMINFOID INTO #TEMP FROM EDINETCLAIM.dbo.T837CLAIMSTATUS WHERE`
		`CLMROUTINGFLAG = 'PR' AND INSERTDATE< GETDATE()-1`
		
		`SELECT ROW_NUMBER() OVER (PARTITION BY B.CLMINFOID ORDER BY HISTINSERTDATE DESC)`
		`ROWID,B.CLMINFOID,B.CLMROUTINGFLAG,B.HISTINSERTDATE INTO #TEMP1 FROM #TEMP A`
		`JOIN EDINETCLAIM_HISTORY.DBO.T837CLAIMSTATUSHISTORY B ON A.CLMINFOID = B.CLMINFOID`
		
		`SELECT D1.CLMINFOID into #LOOP FROM #TEMP1 D1`
		`JOIN #TEMP1 D2 ON D1.CLMINFOID=D2.CLMINFOID`
		`JOIN #TEMP1 D3 ON D1.CLMINFOID=D3.CLMINFOID`
		`JOIN #TEMP1 D4 ON D1.CLMINFOID=D4.CLMINFOID`
		`WHERE`
		`D1.ROWID=1`
		`AND D2.ROWID=2`
		`AND D3.ROWID=3`
		`AND D4.ROWID=4`
		`AND D1.CLMROUTINGFLAG=D2.CLMROUTINGFLAG`
		`AND D1.CLMROUTINGFLAG=D3.CLMROUTINGFLAG`
		`AND D1.CLMROUTINGFLAG=D4.CLMROUTINGFLAG`
		
		`IF EXISTS(SELECT 'X' FROM #LOOP)`
		`BEGIN`
		`SELECT 'Y' AS 'IS_CLAIMS_LOOPING'`
		`END`
		`ELSE`
		`BEGIN`
		`SELECT 'N' AS 'IS_CLAIMS_LOOPING'`
		`END`
		`END`
		
		`SELECT GRGR_ID,* FROM #LOOP A JOIN EDINETCLAIM.dbo.T837CLAIMSTATUS CS ON A.`
		`CLMINFOID = CS.CLMINFOID -- IF CLAIMS LOOPING`
		
		If the market (GRGR_ID) is TNMCD000, those claims will need their ClmRoutingFlag updated to PR to stop them from looping.
		
		- Grab the ClmInfoIDs of all the claims that are looping
		- Email dl-cops-gbd_claimsit_operation@anthem.com and dl-team-cift-Developers
		- COPS SME can run clmroutingflag update in FECA tool using this update query (update EDINETCLAIM.dbo.T837CLAIMSTATUS set clmroutingflag = 'PR' where clminfoid = (insert clmindoid))
		
		After COPS has updated the claims, send the following email for information gathering purposes: TN Looping CLAIMS in Recycle - 11302021 --update date.msg
		
		ONCE YOU HAVE DONE ALL OF THIS, SET THE JOB STEP TO `Completed Normally`. YOU DO NOT NEED TO WAIT FOR A RESPONSE TO THE EMAIL

```

ATL303Z_0015_Daily_VENDOR_DROPOFF_Check	**Explanation of job step:** This alert checks if there are unprocessed files in the VENDOR DROPOFF location for more than 2 days. **Dependency:** 10:15 AM - 9:45 PM ATL303Z_0014A_SANITY_CHECK_FOR_LOOPING_CLAIMS(1) = Completed Normally **Command:** D:\AGP\APPS\FolderCheck\fileChecker.exe **Procedure:** <C_SQLSERVER_HOST.167> <APP_EDINETCLAIM_USER.1951> <APP_EDINETCLAIM_PWD.1950> ES.FILE_INPUT_PATH -3 WLPREJ OTVREJ	Once you complete the below troubleshooting, set the step to **`Completed Normally.`** The vendorIDs that are excluded from this check are passed in the command parameters. Double click the failed step and check output tab for the folder and file. Example provided below: Folder path: "\\VA22PWVISS315\POSTOFFICE\837_IN\TN_CROSSOVER\BCB\DROPOFF\" Ex. File Type: "p837BCB240404240404an01_AGP.X12" If the alert fires, we need to check why the file is not getting picked up by CLA303B from the VENDOR DROPOFF location. Notify COPS SME that a file is in the folder and has not processed. Then, you can set it to completed normally. If you check the Vendor DROPOFF location, and you notice the file in question has a size of 0KB, submit an Axway ticket requesting that they check to see if the file(s) was posted to their FTP with no data. Also, create an INC to track this. Be sure to be as detailed as possible in the description. Look out for a response from Axway. If they (Axway) reply saying that the files were picked up with no data from the FTP site, we'll need to engage CIFT team. CIFT may need to involve the Vendor Market Manager so that the manager can confirm with the state that the file size is correct. They'll (manager) check to see if there was an issue with submission on the state's side. If this file does not get moved from this location, this step will continue to fail. If there are any files and **`Reject`** is in the file name, you can set it to **`Completed Normally`** as those file types load on Saturdays. Check if there is an Axway outage, and then call the COPS SME.

ATL303Z_0016_COMPARE_FILE_COUNT_PPRBAD_PPRXML	**Explanation of job step:**
	
	This job checks mismatched file counts between BAD paper files and BAD paper XML files. Both files count should match, otherwise, this step will fail at 5 PM.
	
	Dependency:
	
	5:00 PM
	
	ATL303Z_0015A_SANITY_CHECK_FOR_ITS_CLAIMS(1) = Completed Normally
	
	Command:
	
	SQLCMD
		Once you complete the below troubleshooting, set the step to **`Completed Normally`**
		
		1. Hold CLA303E_0130_WAIT step ASAP.
		  a. Reason for holding this job: the loading time between the BAD paper file load and the BAD paper XML file load should be less than 30 min. Otherwise, we have to reload both RunIDs again either on the same day or next day.
		2. Run the below SQL Query which will give the list of file that having issue.
		
		``
		SELECT SRC.*
		FROM
		  (SELECT LEFT(INPUT_FILE_NM, PATINDEX('%.x12.va22plvedi001%', INPUT_FILE_NM)
		+3) FILE_NM,
		  *
		  FROM EDINETCLAIM_JC.CIFT.ETLSOURCEINPUTFILELOG
		  WHERE VENDOR_ID = 'CDT'
		  AND RCD_INSERT_DT > CONVERT(DATE,GETDATE())
		  AND ROUND = 14) SRC
		FULL JOIN
		  (SELECT LEFT(INPUT_FILE_NM, PATINDEX('%.x12.va22plvedi001%', INPUT_FILE_NM)
		+3) FILE_NM,
		  *
		  FROM EDINETCLAIM_JC.CIFT.ETLEDINETINPUTFILELOG
		  WHERE VENDOR_ID = 'CDT'
		  AND RCD_INSERT_DT > CONVERT(DATE,GETDATE())
		  AND BATCH_CLASS = 'PPR277') EDI ON EDI.FILE_NM = SRC.FILE_NM
		WHERE EDI.SRC_FILE_ID IS NULL
		  OR SRC.SRC_FILE_ID IS NULL
		``
		
		3. Before taking any action, we have to check with Production OTVM (OSS) for whether any file is in undelivered mode.
		  i. If we have undelivered files, we have to manually deliver those files from OTVM.
		  ii. If don't have undelivered files, we can go ahead and drop files and regenerate either BAD Paper XML or BAD Paper X12 RunIDs. Proceed to steps b and/or c.

	Procedure: /b -S <EDINET_SERVER.1964> -U <APP_EDINETCLAIM_USER.1951> -P <APP_EDINETCLAIM_PWD.1950> -Q "DECLARE @PPRBAD INT DECLARE @PPR277 INT SELECT @PPRBAD = COUNT(*) FROM EDINETCLAIM_JC.[CIFT].[ETLEDINETINPUTFILELOG] WHERE CONVERT (VARCHAR(10), RCD_INSERT_DT, 111) > CONVERT (VARCHAR(10), GETDATE()-2,111) AND PEGA_FILE_DROP_FLAG = 'N' AND BATCH_CLASS = 'PPRBAD' SELECT @PPR277 = COUNT(*) FROM EDINETCLAIM_JC.[CIFT].[ETLEDINETINPUTFILELOG] WHERE CONVERT (VARCHAR(10), RCD_INSERT_DT, 111) > CONVERT (VARCHAR(10), GETDATE()-2,111) AND PEGA_FILE_DROP_FLAG = 'N' AND BATCH_CLASS = 'PPR277' IF ISNULL (@PPRBAD,0) = ISNULL(@PPR277, 0) BEGIN SELECT 'Y' AS 'IS_MATCHED' END ELSE BEGIN SELECT 'N' AS 'IS_MATCHED' END"	This step should be performed in UAT, so we do not need to hold CLA303B. b. If BAD Paper XML file is missing, we have to regenerate BAD Paper XML from OTVM by dropping the 277Ack file in the corresponding OTVM drop off location c. If BAD Paper X12 file is missing, we have to regenerate BAD Paper X12 from OTVM by dropping round-2 X12 file in the corresponding OTVM drop off location. 4. If we are generating BAD Paper X12, then follow these steps: a. Take a Round-2 X12 file from PROD and drop file in UAT OTVM drop off location: \\VA22PWVISS315.corp.agp.ads\UAT_CIFT_INPUTS\CDT_837_INBOUND_R2, i. BAD Paper X12 will generate from: \\VA22PWVISS315.corp.agp.ads\UAT_Conduent_837_IN\BAD_ROUND2. ii. Once generated, proceed to step b. b. If we regenerated BAD Paper X12, place the file here: \\VA22PWVISS315.corp.agp.ads\POSTOFFICE\277_Status_Update\BadFiles\ 5. If we are generating BAD Paper XML, then follow these steps: a. Take Round-2 277Ack file from PROD and place the file in the UAT OTVM drop off location: \\VA22PWVISS315.corp.agp.ads\UAT_CIFT_INPUTS\277CA_RECON_INPUT, the i. BAD Paper XML file will generate from: \\VA22PWVISS315.corp.agp.ads\UAT_277CA_OUT_Recon\XML, ii. Once generated proceed to step b. b. If we regenerated BAD Paper XML , place the file here: \\VA22PWVISS315.corp.agp.ads\POSTOFFICE\277CA_OUT_Recon\XML\ 6. Release CLA303E_0130_WAIT once the file moved to the STAGE location (after steps 4b and/or 5b). CLA303B should run at least one time after these steps have been taken.
ATL303Z_0017_Run Check for Paper Claims with no Service Lines	**Explanation of job step:** This job step checks for any paper claims that do not have a service line.	Once you complete the below troubleshooting, set the step to **Completed Normally** This should never fail. If it does, which is why you're reading this, call COPS SME on-call ASAP. COPS SME: Work with CIFT Team to figure out why the claim wasn't processed correctly.

	Dependency: ATL303Z_0005_Check for outstanding paper claims(1) = Completed Normally CLA303C_1D00_END_INBOUND_FILE_PROCESS(1) = Completed Normally

ATL303Z_0019_SANITY_FOR_PAPER_BAD_CLAIM_LOAD	**Explanation of job step:** This step checks if the XML files are loaded for the BAD Paper files. The rejection information for the BAD Paper files are loaded through these XMLs. If BAD paper files are loaded without these XMLs then there would be claims in CCOP without rejection information and they would not be able to work.	Reach out to COPS SMEs to investigate why the XMLs for the BAD Paper files are not loaded for the day. One reason this step can fail is because the 277IntakeFileListener is stopped. If this is the case, restart the listener. Once SME completes troubleshooting the issue, set the step to **`Completed Normally`**
