CFT008_1D00_EDOCS

1. Purpose:

This Job group generates the extracts for the new day electronic claims loaded through EDINET. These extracts are then loaded to Macess to generate images for these claims. These images are used by multiple teams downstream, so if this job group is not completed on time, multiple teams would be impacted.

The SLA for this job group is to complete by 6 AM in the morning.

> **If the job is running beyond 6 AM Monday-Friday, we need to send a broadcast (at 6 AM)** stating that the image generation process is running long; Broadcast Long Running EDOC Process - INSERT DATE.msg
>
> Broadcasts are not necessary on the weekends as there are minimal/no operators online to be impacted by a delay in images being ready.

2. General Info:

Priority	1
Process location	EDINET1P **`EDINETCLAIM`** DB
Calendar	Daily, except Monday
Scheduled Start Time	12:00 AM
SLA	6:00 AM
Internal Notifications - Initial	COPs SME On-Call dl-cops-gbd_claimsit_operation@anthem.com; dl-Mushu <dl-Mushu@anthem.com>
Customer Notification - Secondary	N/A
Broadcast distribution list - Final	Broadcast Long Running EDOC Process - INSERT DATE.msg RESOLUTION Broadcast Long Running EDOC Process - (insert todays date).msg

3. Pre-Requisites

1. 12:00AM-4:00AM
2. CFT034_1D00_CIFT_MBR_PRV_RFRSH is completed normally

4. Job Steps

Steps	Explanation	Dependency	Command	Procedure	Failure Instruction

CFT008_0010_INF_XXXX_XX_EDOCS_FLAG (1)	• Calls wf_EDOC_FLAG_EDINETCLAIM_UPD Informatica Workflow • Reads MACESS ACK file and updates EDOC_FLAG = 'Y' and EDOC_DT to system date once MACESS ACK file has been stable for 5 minutes	Doesn't run on Mondays Agent:	<C_INFA105_RUN_WORKFLOW.13826>	<C_INFA10_CIFT_SERVICE.9095> <C_INFA10_CIFT_DOMAIN.9097> <APP_CIFT_USER.7920> <APP_CIFT_INF10_PWD.9098> CS_EDOC wf_EDOC_FLAG_EDINETCLAIM_UPD	In Informatica: 1. Connect REPO_GBD_PROD_CLAIMS 2. CS_EDOC 3. wf_EDOC_FLAG_EDINETCLAIM_UPD. Sessions ending with **_1** in the workflow are safe to ignore failures, and the workflow is configured to succeed even if any/all such sessions fail. When troubleshooting failures, focus on sessions not ending with **_1**. 1. Check session logs for deadlock. 2. If the workflow failed because of deadlock on one of the workflow's sessions, rerun the parent workflow, 3. When the workflow itself succeeds, set the Tidal step to **Completed Normally** **Workflow Failed Again** If the workflow itself failed for any other reason after restarting, call the COPS SME on-call. if all the steps are complete except the last two check the below file path for file generation: \\va01pstodfs003.corp.agp.ads\apps\global\MacessBulk\PROD\Document_Import\Ack The XH and XU files need to be stable for this job to kick off and finish the EDOC job. Once its at the last two steps its usually just waiting on the XH file to finish loading in the file path. The XH file typically doesn't go over 250K KB. You can gauge completion based off those numbers.
CFT008_0020_INF_XXXX_XX_HCFA_EDOCS_EXTRACT (1)	• Calls wf_EDINETClaim_EDOC_HCFA_XML Informatica Workflow • Pulls Professional claim data from EDINET CLAIM where EDOC_Flag <> 'Y' AND Clmtype = 'M', formats the data (such as using a 'X' for male or female), and loads to Staging tables in EDINET CLAIM • The XML step is generated and placed in the ToDo folder on the Macess server - \\va01pstodfs003.corp.agp.ads\apps\Global\MacessBulk\PROD\Document_Import\ToDo	Agent:	<C_INFA105_RUN_WORKFLOW.13826>	<C_INFA10_CIFT_SERVICE.9095> <C_INFA10_CIFT_DOMAIN.9097> <APP_CIFT_USER.7920> <APP_CIFT_INF10_PWD.9098> CS_EDOC wf_EDINETClaim_EDOC_HCFA_XML	

CFT008_0030_INF_XXXX_XX_UB_EDOCS_EXTRACT (1)	• Calls wf_EDINETClaim_EDOC_UB_XML Informatica Workflow • Pulls Institutional claim data from EDINET CLAIM where EDOC_FLAG <> 'Y' AND Clmtype = 'H', formats the data (such as using a 'X' for male or female), and loads to Staging tables in EDINET CLAIM • The XML step is generated and placed in the ToDo folder on the Macess server - \\va01pstodfs003.corp.agp.ads\apps\Global\Macess Bulk\PROD\Document_Import\ToDo	Agent:	<C_INFA105_RUN_WORKFLOW.13826>	<C_INFA10_CIFT_SERVICE.9095> <C_INFA10_CIFT_DOMAIN.9097> <APP_CIFT_USER.7920> <APP_CIFT_INF10_PWD.9098> CS_EDOC wf_EDINETClaim_EDOC_UB_XML	There is a known issue where the session in informatica s_m_EDINETClaim_EDOC_UB_XML will fail due to unexpectedly terminated error. Root cause is unknown. INFORM CIFT WHEN PERFORMING STEP 5 Follow the below steps 1. Connect REPO_GBD_PROD_CLAIMS then CS_EDOC and rerun the session in informatica. If failure persists continue to step 2.  2. Create an INC ticket and escalate to INFORMATICA DBA, and CIFT team. 3. Send email with WF LOG, session LOG to CIFT and INFA DBA. 4. Continue to rerun the session every so often to see if the issue fixes itself. 5. If by 3PM the job is unable to run and keeps terminating, set the job step **CLA008_0030_INF_XXXX_XX_UB_EDOCS_EXTRACT** to completed normally, and override dependencies for **CLA008_0010_INF_XXXX_XX_EDOCS_FLAG.** 6. **jobs that update the UB file will fail and that is okay. Once CLA008_0010_INF_XXXX_XX_EDOCS_FLAG completes cancel the job group and set it completed normally CLA008_1D00_EDOCS.**
CFT008_0035_GET_UB_EDOC_FILENAME	Get the name of the generated UB EDOC XML file (XU_*.xml) from staging location	Agent:	cmd	/c DIR /B <V_CIFT_MACESS_PATH.11635>\Staging\XU*.xml	

CFT008_0040_UB_EDOC_REMOVE_XML_NAMESPACE	Remove default namespace from UB XML file(XU_*.xml)	Agent:	<C_CYG_HOME.4582>\bin\bash.exe	-l -c "<C_INFA102_CYGWIN_PATH_CLAIMS.11636>CS_EDOC/Scripts/EDOC_XML.sh <V_UB_EDOC_FILENAME.11637>"	If this job is running longer than 5-60 minutes there is an issue. The automated process of this job is to Remove default namespace from the file. If the job is running long you can manually handle it. 1.Check for the UBXML file in \\va01pstodfs003.corp.agp.ads\apps\global\MacessBulk\PROD\Document_Import\Staging  2. Open the file in ultra edit (the bigger the file the longer it takes to load. Do not give up or close out ultra edit) 3. Once open you need to manual remove the default name space, which will be an edit to line 2 in the file.  4. You need to delete xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" from line 2 5. Once deleted line two should only read <macess_exp_import_export_file> 6. save the file and you should see a new txt file pop up and moving in the file path  7. Once the file is done processing we need to check if there are any errors in below file path. \\va01pstodfs003.corp.agp.ads\apps\global\MacessBulk\PROD\Document_Import\Errors 8. If the error file looks like below then you are good to go. That is the default text. If there is anything more then escalate to CIFT on call. 
CFT008_0045_UB_EDOC_MOVE_FILE	move <V_CIFT_MACESS_PATH.11635>\Staging\XU*.xml <V_CIFT_MACESS_PATH.11635>\ToDo\ && move <V_CIFT_MACESS_PATH.11635>\Staging\PC_XU*.xml <V_CIFT_MACESS_PATH.11635>\ToDo\ Move the UB XML file (XU_*.xml, PC_XU_*.xml) from staging to Dropoff location	Agent:	cmd	/c move <V_CIFT_MACESS_PATH.11635>\Staging\XU*.xml <V_CIFT_MACESS_PATH.11635>\ToDo\ && move <V_CIFT_MACESS_PATH.11635>\Staging\PC_XU*.xml <V_CIFT_MACESS_PATH.11635>\ToDo\	
CFT008_0046_GET_HCFA_EDOC_FILENAME	Get the name of the generated HCFA EDOC XML file(XH_*.xml) from staging location	Agent:	cmd	/c DIR /B <V_CIFT_MACESS_PATH.11635>\Staging\XH*.xml	Look for the XH_*.xml file in the following folder: \\va01pstodfs003.corp.agp.ads\apps\Global\MacessBulk\PROD\Document_Import\Staging If the file is there, rerun the step. If the file is not there, further investigation is needed. Check output of previous steps.
CFT008_0047_HCFA_EDOC_REMOVE_XML_NAMESPACE	Remove default namespace from HCFA XML file(XH_*.xml)		<C_CYG_HOME.4582>\bin\bash.exe	-l -c "<C_INFA102_CYGWIN_PATH_CLAIMS.11636>CS_EDOC/Scripts/EDOC_XML.sh <V_HCFA_EDOC_FILENAME.12462>"	Same instructions as CFT008_0040_UB_EDOC_REMOVE_XML_NAMESPACE
CFT008_0060_CLAIM_ATTACHMENT_RECONCILE (1)	Runs the executable D:\AGP\APPS\VENDOR_PROCESS_CLAIMS_ATTACHMENTS_WLP\Vendor_ProcessClaimsAttachments.exe in the VA22PWVISS315 server with /reconcileattachments as parameter. The XML step is generated and placed in the ToDo folder on the Macess server - \\va01pstodfs003.corp.agp.ads\apps\Global\MacessBulk\PROD\Document_Import\ToDo	Doesn't run on Mondays Agent:	D:\AGP\APPS\VENDOR_PROCESS_CLAIMS_ATTACHMENTS_WLP\Vendor_ProcessClaimsAttachments.exe	/reconcileattachments
