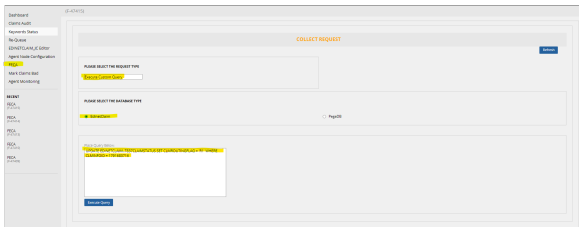
Broken-Process or Error Claim(s) on T837/CIRT Dashboard

UPDATE 04 Sep 2024



If CIRT error message is: **`<rowdata REPEATINGINDEX="1">The reference .RuleID!="" is not valid. Reason: FUAInstance-NullMyStepPage</rowdata>`**: follow these steps

1. Query EdinetClaim..T837ClaimStatus to get the GRGR_ID. **If GRGR_ID is WAMCD000, go to Step 2.**
    a. If GRGR_ID != or <> (both operators mean 'does not equal') WAMCD000, do not touch the claim and just email CIFT.
2. Access FECA
3. "Execute Custom Query"
4. Choose Edinetclaim
5. Run this with updated ClmInfoID (not surrounded with ' ' as ClmInfoID is a BIGINT data type):

```
UPDATE EDINETCLAIM..T837CLAIMSTATUS SET
CLMROUTINGFLAG = 'R1' WHERE CLMINFOID =
```

6. Then hit "execute query"
7. Go back to Dashboard, and then hit "Save" on the dialogue box that will pop up.

This page describes how to handle new "Broken-Process" and "Error" claims on the T837/CIRT Dashboard.

> **Note**
>
> This runbook details steps to take for broken-process/errored claims in the CIRT Agent Queue Status table only.
>
> > If the Broken-Process or Error claim is in the T837 Agent Queue Record Status, follow the steps for Informing CIFT/CIRT Team.
> >
> > **Broken-Process claims in the T837 Agent Queue need to be removed by CIFT as quickly as possible as they can prevent the ClaimsProcess.done file from generating, which will delay all of Claims Processing.**
>
> If there is a broken process or error in **CIRT** during overnight hours, but claims processing is still progressing you can pass off to 6am shift. No need to call on call.
>
> **Always CALL** for errors or broken processes in **T837**.

Please note: once claims have been loaded to the T837 Database, these claims have to undergo a pre-adjudication process. This means that they have to go through a staging table before the CIRT process starts. It's during these processes where it's possible that claims will become broken or error out. There are several reasons as to why this happens.

- There could be an issue with the claim's data.
- There could be a database issue.
- There could be an issue with code deployed into production.

Table of Contents

- UPDATE 04 Sep 2024
- First Steps
- Two Error Types
    - Broken Process
    - Error
        - Steps to take for no more than 3 broken-process/error claims:
        - XML Window (also referred to as the "logs"):
- Actionable Log Errors
- Informing CIFT/CIRT Team:
- Deleting Broken-Process/Errors on the dashboard
    - *Please make sure Broken-Process/Error are looked into before deleting*

First Steps

Before you begin researching the errored claims, please follow the "First Steps" below.

First Steps	Screenshots
Make sure you are connected to the application **T837Mapping (T837Mapping:FECASuperUser)**	Make sure "App" is selected on the left-hand panel, and then click in the search bar. Search for "System-Queue-DefaultEntry-CIRT" Click on the name that appears:  Then search for "System-Queue-DefaultEntry" and follow the same step. **Note** System-Queue-DefaultEntry-CIRT is the CIRT Agent Queue and System-Queue-DefaultEntry is the T837 Agent Queue. These queues correspond with the T837 and CIRT AGENT QUEUE STATUS on the T837/CIRT Dashboard. If a Run ID is active, and numbers appear under T837 and CIRT agent queues, clicking on either class above (System-Queue-DefaultEntry-CIRT or System-Queue-DefaultEntry) will show the claims with their statuses, respectively. **The only entries you will click on will be for claims with Error or Broken Process statuses.**	
Two Error Types

Broken Process	Erro

You can identify "Broken-Process" error in the dashboard like below:

CIRT AGENT QUEUE RECORD STATUS	CIRT AGENT QUEUE RECORD COUNT
Broken-Process	1
Now-Processing	59
Error	6
Scheduled	1,820

You can identify "Error" claims in the dashboard like belo

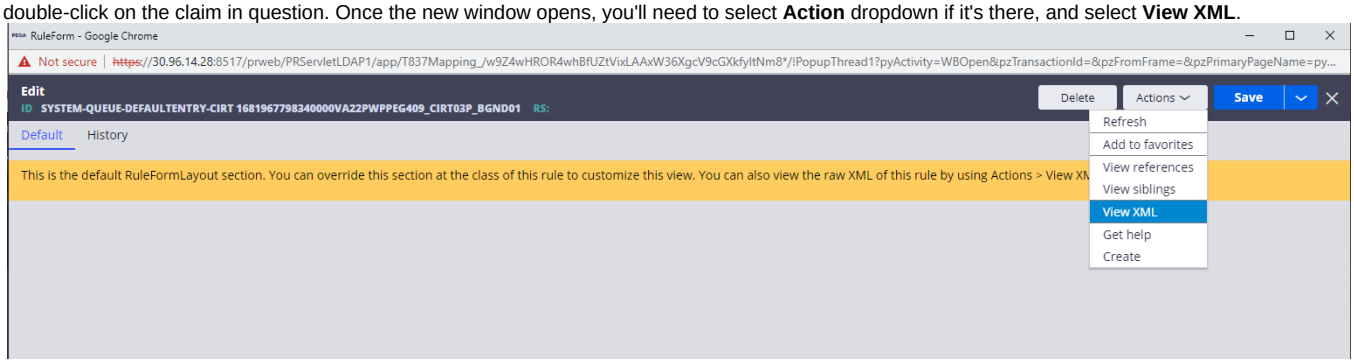
CIRT AGENT QUEUE RECORD STATUS	CIR
Now-Processing	60
Error	3
Scheduled	2,9

Steps to take for no more than 3 broken-process/error claims:

In the above picture, there are 3 claims in the CIRT Agent Queue. Connect to **T837Mapping (T837Mapping:FECASuperUser)** and proceed to access the class for CIRT Agent Queue called **System-Queue-DefaultEntry-CIRT**.

- If there are more than 3 claims in either status, continue gathering the necessary data and inform COPS SME.
- If the Broken-Process or Error claim is in the T837 Agent Queue Record Status, follow the steps for Informing CIFT/CIRT Team.

Double-click the file that has the **broken process** or **error status**. The page may refresh, and you'll have to click on the agent queue again and double-click on the claim in question. Once the new window opens, you'll need to select **Action** dropdown if it's there, and select **View XML**.



XML Window (also referred to as the "logs"):

Another window will open like the one below. Scroll down on the new window, and search for the error. While searching for the error, it's important you also locate the Claim ID Info, denoted by **<ClmInfoID>##########</ClmInfoID>** and make note of it.

Note: the Claim Info ID currently is 10 characters long; eventually, they will be 11 characters long.

```

Find the error. In this case, you can see the 3 rows of errors at the bottom of the screenshot.

Once you locate the errors, let COPS SME on-call know the number of errored claims (found under the agent queue status tables). Provide the Claim Info ID as well as the error(s) reason.

If the error is "the query has timed out," or

<rowdata REPEATINGINDEX="1">The reference .RuleID!="" is not valid. Reason: FUAInstance-NullMyStepPage</rowdata>

We need to mark the claim with R1. Query would be (as an example)

UPDATE EDINETCLAIM..T837CLAIMSTATUS SET CLMROUTINGFLAG = 'R1' WHERE CLMINFOID = 1791683716

proceed to Log Error: the query has timed out. If the error is **not** "the query has timed out," inform COPS SME and proceed to Informing CIFT/CIRT Team.

Actionable Log Errors

Action Item	Screenshot
Connect to **T837Mapping (T837Mapping:FECASuperUser)** and proceed to access the pinned class for CIRT Agent Queue called **System-Queue-DefaultEntry-CIRT** . Retrieve the ClmInfoID following the steps under "Steps to take for no more than 3 broken-process /error claims"	▼<pagedata> <pxUpdateSystemID>va22pwppeg404_cirt03p_bgnd01</pxUpdateSystemID> <pxUpdateAgentName>CIRT:ProcessClaimIntake4</pxUpdateAgentName> <pyItemId>SYSTEM-QUEUE-DEFAULTENTRY-CIRT 1687341421929000VA22PWPPEG409_CIRT03P_BGND02</pyItemId> <pyRuleFormStatusTime>20230622T151743.718 GMT</pyRuleFormStatusTime> <pyPriority>0</pyPriority> <pxCreateDateTime>20230621T095701.929 GMT</pxCreateDateTime> <pyUseApplications>true</pyUseApplications> <pyItemStatus>Error</pyItemStatus> <pxUpdateSystemNode>VA22PWPPEG404</pxUpdateSystemNode> <pxInsName>SYSTEM-QUEUE-DEFAULTENTRY-CIRT 1687341421929000VA22PWPPEG409_CIRT03P_BGND02</pxInsName> <pyShowJavaWindowName>GeneratedJava20230622T151743.719 GMT</pyShowJavaWindowName> <pxSaveDateTime>20230621T100336.663 GMT</pxSaveDateTime> <pyToolbarSaveLabel>Save</pyToolbarSaveLabel> <pzInsKey>SYSTEM-QUEUE-DEFAULTENTRY-CIRT SYSTEM-QUEUE-DEFAULTENTRY-CIRT 1687341421929000VA22PWPPEG409_CIRT03P_BGND02</pzInsKey> <pyMinimumAgeForProcessing>0</pyMinimumAgeForProcessing> <pyMaxAttempts>3</pyMaxAttempts> <pyRetainOnSuccess>false</pyRetainOnSuccess> <pyRetainOnFailure>true</pyRetainOnFailure> <pyIsStaleRuleCheckEnabled>false</pyIsStaleRuleCheckEnabled> <pySelectId>1687341421929000VA22PWPPEG409_CIRT03P_BGND02</pySelectId> <pyRuleFormStatus>Good</pyRuleFormStatus> <pzDocumentKey>SYSTEM-QUEUE-DEFAULTENTRY-CIRT SYSTEM-QUEUE-DEFAULTENTRY-CIRT 1687341421929000VA22PWPPEG409_CIRT03P_BGND02</pzDocumentKey> <pyAttempts>3</pyAttempts> <pxLastExecutionDateTime>20230621T100251.305 GMT</pxLastExecutionDateTime> <ClmInfoID>1513330394</ClmInfoID> <pyMinimumDateTimeForProcessing>20230621T100251.301 GMT</pyMinimumDateTimeForProcessing> <pyAccessGroup>CIRT:Administrators</pyAccessGroup> <pyAgentName>CIRT:ProcessClaimIntake4</pyAgentName> <pxObjClass>System-Queue-DefaultEntry-CIRT</pxObjClass> <pxLimitedAccess>Dev</pxLimitedAccess> <pxCommitDateTime>20230621T100336.773 GMT</pxCommitDateTime> <RunID>230621006</RunID> <pzLastRunSuccessful>false</pzLastRunSuccessful> <pzStatus>valid</pzStatus> <pyRuleVersionsList REPEATINGTYPE="PageList"/> ▼<pxErrorList REPEATINGTYPE="PropertyList"> <rowdata REPEATINGINDEX="1">There was a database problem when performing an RDBExecute: code: 0 SQLState: HY008 Message: The query has timed out.</rowdata> <rowdata REPEATINGINDEX="2">There was a database problem when performing an RDBExecute: code: 0 SQLState: HY008 Message: The query has timed out.</rowdata> <rowdata REPEATINGINDEX="3">There was a database problem when performing an RDBExecute: code: 0 SQLState: HY008 Message: The query has timed out.</rowdata> </pxErrorList>

Research the claim and get the insert date.	`SELECT InsertDate FROM EDINETCLAIM..T837ClaimStatus (NOLOCK) WHERE ClmInfoID =`
While still connected to **T837Mapping (T837Mapping: FECASuperUser)** in **Dev Studio**, access Case Manager 7 via Launch Portal to go to the T837/CIRT Dashboard.	Notice you have the FECA option on the navigation panel. Select it.	Tip FECA stands for Front End Claims Adjustment Tool. You'll want to select "Create a New DB Interaction."	
Time Created	Last Updated Time	Case ID	Created by	Domain ID	Work status	Request Type
10/6/23 5:16 PM		F-1726	Samal, Sanjay Kumar	AH76404	Resolved	Requeue
10/6/23 4:28 PM		F-1725	Samal, Sanjay Kumar	AH76404	Resolved	Requeue
10/6/23 4:21 PM		F-1724	Samal, Sanjay Kumar	AH76404	Resolved-Completed	Requeue
10/6/23 3:00 PM		F-1723	Siddappa, Shalini	AL38740	Resolved	Requeue
10/6/23 2:31 PM		F-1722	Siddappa, Shalini	AL38740	Resolved	Recycle
10/6/23 2:13 PM		F-1721	Siddappa, Shalini	AL38740	Resolved	Requeue
10/6/23 12:56 PM		F-1720	Siddappa, Shalini	AL38740	Resolved	Recycle
10/6/23 11:35 AM		F-1719	Siddappa, Shalini	AL38740	Resolved	Requeue
10/6/23 11:05 AM		F-1718	Samal, Sanjay Kumar	AH76404	Resolved	Recycle

For the single claim with the query timed out error, you'll select:

- Mark Claim(S) to Recycle
- ClmInfoID

Enter in the ClmInfoID retrieved from the first step.

Hit search.

Note: the ClmRoutingFlag is blank. When you mark this for recycle, the ClmRoutingFlag will be HR. Updating the claim's status to HR means this claim will be picked up and processed in the Recycle Controller.

Select YES, you do want to proceed.

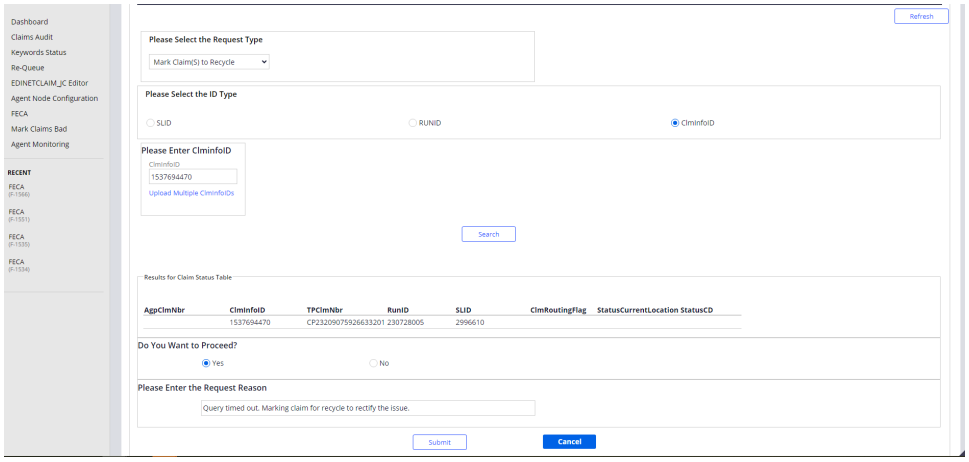
Request reason: Query timed out. Marking claim for recycle to rectify the issue.

CLICK OUTSIDE OF THE TEXTBOX.

Then, select submit.

NOTICE

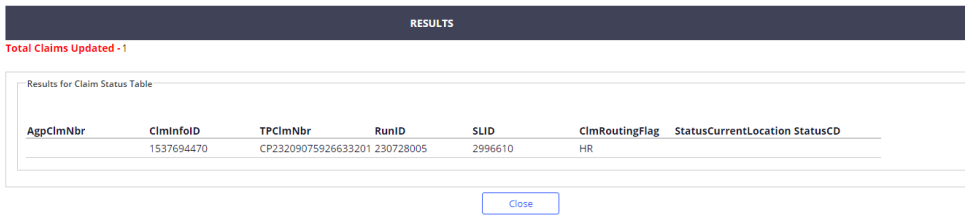
Notice: the AgpClmNbr is blank. This means `CLA303Z_0018_SANITY_CHECK_FOR_MISSING_AGPCLMNBRS` may fail. Be sure to pass this off to the next shift. Follow the runbook instructions for that step and set this step to CN.



Results.

Note the ClmRoutingFlag.

Click "Close"



Note

Note: if you updated a broken process claim for recycle, when the current RunID completes, that broken process will turn into an error. This is how the process was designed to work. Notate you handled the broken-process/errored claim on PD that way COPS SMEs can check on the errored claim the next day.

Tidbit

Tidbit: When you update a claim for recycle, that claim will be included in the Recycle Controller process, which is kicked off by `CLA301B_1D00_CLAIMS_RECYCLE_CONTROLLER`.

Informing CIFT/CIRT Team:

An email will need to be sent to CIFT Leads DL as well as the CIFT on-call.

TO: DL-Team-CIFT-Developers@elevancehealth.com; dl-Mushu <dl-Mushu@anthem.com; CIFT on-call

CC: DL-GBDIT_EnvOps@elevancehealth.com

Subject: T837 (or) CIRT Broken Process/Error Claim(s) MM/DD/CCYY

The points you want to address in the email are as follows:

- There are x claims in [choose status: broken process or error]
- the Claim ID info (pulled from XML(s))
- The InsertDate is
- Failure reason
- Ask if this could be related to any maintenance or deployment from the previous night
- Ask what action is needed for the claims in question

After sending the email, please closely monitor the Atlas Ops inbox for a response. At this time, please work closely with COPS SMEs as to how to proceed handling the broken-process/error claim. Take note of what actions are taken for the given scenario as this would be helpful for future instances.

Follow the below steps to make sure claims were successfully recycled.

For past claims (Date listed under "Create/Date Time" on the queue), run the following query for all errored claims from previous days.

Claims successfully recycled

`SELECT *`
`FROM EDINETCLAIM..T837ClaimStatus (NOLOCK)`
`WHERE CLMINFOID IN () --Insert CLMINFOID from log, separated by commas for each CLMINFOID`

If they were given an AGPClmNbr, and the ClmRoutingFlag is not blank or 'HR', then they recycled successfully, and that particular error can be deleted from the dashboard.

	ClmStatusID	ClmInfoID	TPClmNbr	AGPClmNbr	TradingPartnerCD	StatusPayerID	EDICntlNbr	ClmRoutingFlag	ProcessCD

Deleting Broken-Process/Errors on the dashboard

Please make sure Broken-Process/Error are looked into before deleting

Action Item	Screenshot

Connect to **CIRT** and search for the utility "**SupportClearErrorQueues"**	 You will want to select **Action** and a drop down menu will appear. Select **Run** and a new window will appear.	 
If we have a **Broken-Process** in **T837,** then we need to select **IsT837** and "type in **Broken-Process** into **Status's Value** field. Click **Run** button on the top left and verify on the T837 dashboard if **Broken-Process** is deleted.	 If we have a **Error** in **CIRT**, then we need to select **IsCIRT** and type in **Error** into **Status's Value** field. Click **Run** button on the top left and verify on the T837 dashboard if **Error** is deleted.
