Understanding Claims

“What the Heck” CLAIMS OVERVIEW

Part of the responsibility is in **your** hands to make sure the providers get paid to continue care to our members.

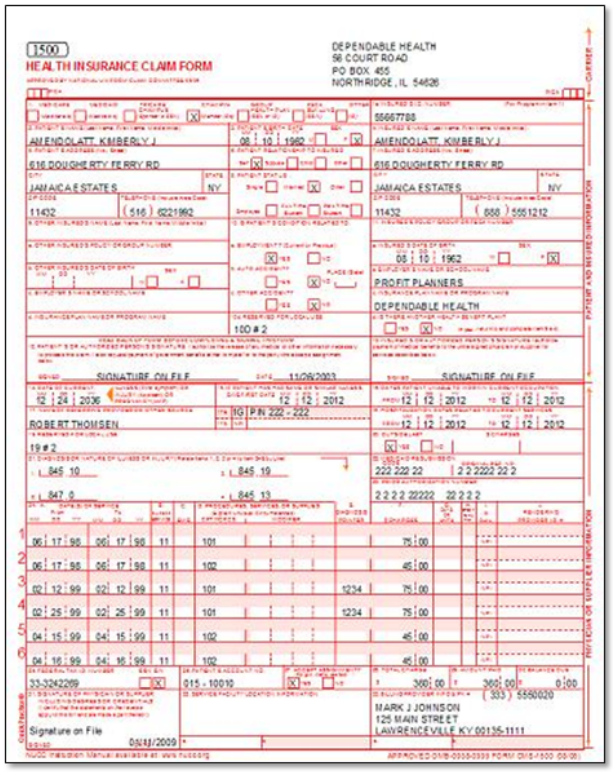
What is a Health Care Claim?

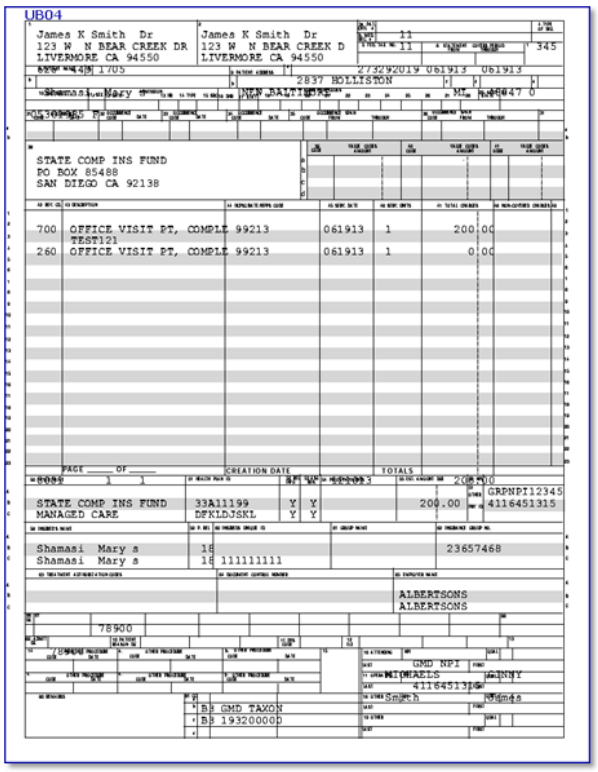
A health insurance claim is a bill for health care services that your health care provider submits to the insurance company for payment. With many plans, when you go to the doctor for a routine checkup and your bill is $100, you pay a co-pay or coinsurance of $25 and your doctor bills your insurance carrier for the remaining $75.

What are the different types of health care claims?

- Hospital (UB-92/UB-04)
- Medical (HCFA 1500 or CMS-1500)

For GBD, Vision and Dental services are subcontracted and we do not process them.





Where are the paper claims?

Currently, the paper claims

- are scanned at the DCC,
- sent to the paper vendor,
- The data is converted to an 837,
- The 837 is processed by the COPS team
- Claim images are stored in Macess

What Is the Difference Between the UB-04 and CMS-1500 Forms?

UB	CMS
Used by medical facilities	Used by individual practitioners
Hospitals, nursing facilities, and other facility providers.	Non-institutional health care service providers or medical professionals, such as individual doctors, nurses, and therapists.

Claim Sources for Front End Claims

Clearinghouses/EDI	COBA	CareMore	Paper	Encounters	Care Compass	Rejected
Availity (THIN)	FL	CA	SmartData (pretty sure this is CDT now)	Caremore	CareCompass	EEDI
Change (Emdeon)	IA	DC	EEDI - Paper	EEDI	WI SSI	
TMHP	KY	IA		Prospect		
KS (12/2018 Runout)		TN		VanLang		
FL Simply		TX		Wellmed		
Healthstar						

EEDI - EDI						
EEDI – EDI Green						
PPL						

Average Daily Claim Count

SUN	MON	TUES	WED	THURS	FRI	SAT
N/A	456,112	645,827	550,707	549,617	530,482	186,980

When deploying programming changes that impact COPS and the front-end processing needs to be suspended, the developer may want to consider deployment on the low claim count days.

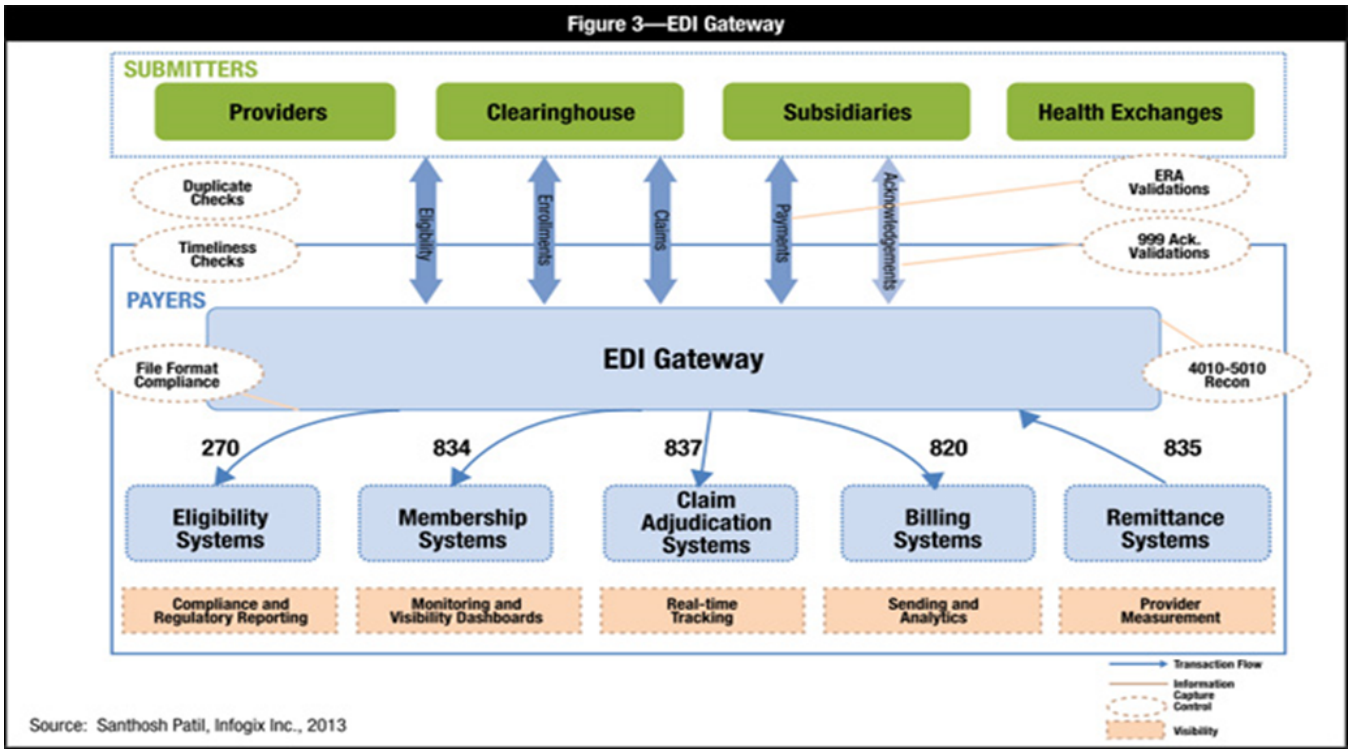
Once a claim is received, we are required to process that claim within a specified number of days. If we miss the deadline, we are required to pay interest on the claims.

Methods of Sending Claims

- Three Major methods for sending electronic claims
  - Clearinghouse
  - Direct Transmission
  - Direct Data Entry (DDE)
- Most medical offices use Clearinghouses for HIPAA EDI Format

Why is HIPAA Important?

- Enacted to:
  - Protect the privacy of a patient's personal and health information.
  - Provide for electronic, and physical security of personal and health information.
  - Reduce health care fraud and abuse.



EDI Claim Transactions

Transaction	Explanation	Transaction	Explanation
837	Used submit health care claim billing information, encounter information, or both, except for retail pharmacy claims	270	Used to inquire about the health care benefits and eligibility associated with a subscriber or dependent
835	Used to make a payment, send an Explanation of Benefits (EOB) remittance advice, or make a payment and send an EOB remittance advice only from a health insurer	271	Used to respond to a request inquire about the health care benefits and eligibility associated with a subscriber or dependent.
834	Used by employers, unions, government agencies, associations or insurance agencies to enroll members to a payer.	276	Used by a provider, recipient of health care products or services or their authorized agent to request the status of a health care claim
820	Used to make a premium payment for insurance products.	277	Used by a health care payer or authorized agent to notify a provider, recipient or authorized agent regarding the status of a health care claim or encounter, or to request additional information from the provider
997	This transaction set can be used to define the control structures for a set of acknowledgments to indicate the results of the syntactical analysis of the electronically encoded documents	278	Used to transmit health care service information, such as subscriber, patient, demographic, diagnosis or treatment data for the purpose of request for review, certification, notification or reporting the outcome of a health care services review.

What is an 837?

The EDI 837 transaction set is the format established to meet HIPAA requirements for the electronic submission of healthcare claim information. The claim information included amounts to the following, for a single care encounter between patient and provider:

- A description of the patient
- The patient's condition for which treatment was provided
- The services provided
- The cost of the treatment

What is an X12?

The X12 Transaction Set contains the format and establishes the data contents of the Healthcare Claim Transaction Set (837) for use within the context of an Electronic Data Interchange (EDI) environment.

- This transaction set can be used to submit healthcare medical claims, billing information, encounter information, or both
- Can be submitted from providers of healthcare services to payers, either directly or via intermediary billers and claims clearinghouses.
- Can also be used to transmit healthcare claims and billing payment information between payers with different payment responsibilities (COB)

OTVM (Faciledi)

Third party application used to validate the incoming 837I and 837P files.

Most claims are validated using HIPAA levels 1-6

- Type 1 EDI Standard Integrity Testing
  - Validate basic syntactical integrity of the EDI submission
- Type 2 HIPAA Implementation Guide Requirement Testing
  - Validate HIPAA requirement-guide-specific syntax requirement by checking limits on repeat counts, used or not used qualifiers, code, elements, and segments
- Type 3 HIPAA Balance Testing
  - Validate that claim line items amounts are equal to total claim amount
- Type 4 HIPAA Inter-Segment Situation Testing
  - Validate inter-segment relationship (For example, if element A exists, then element B must be populated)
- Type 5 HIPAA External Code Set Testing
  - Validate specific code set values for HIPAA standards.
- Type 6 Product Type/Type of Service Testing
  - Validate that segments that differ based on certain Healthcare services are properly created and processed
- Exclusions are also set up in OTVM which will allow a claim to pass even if they reject for a particular reason

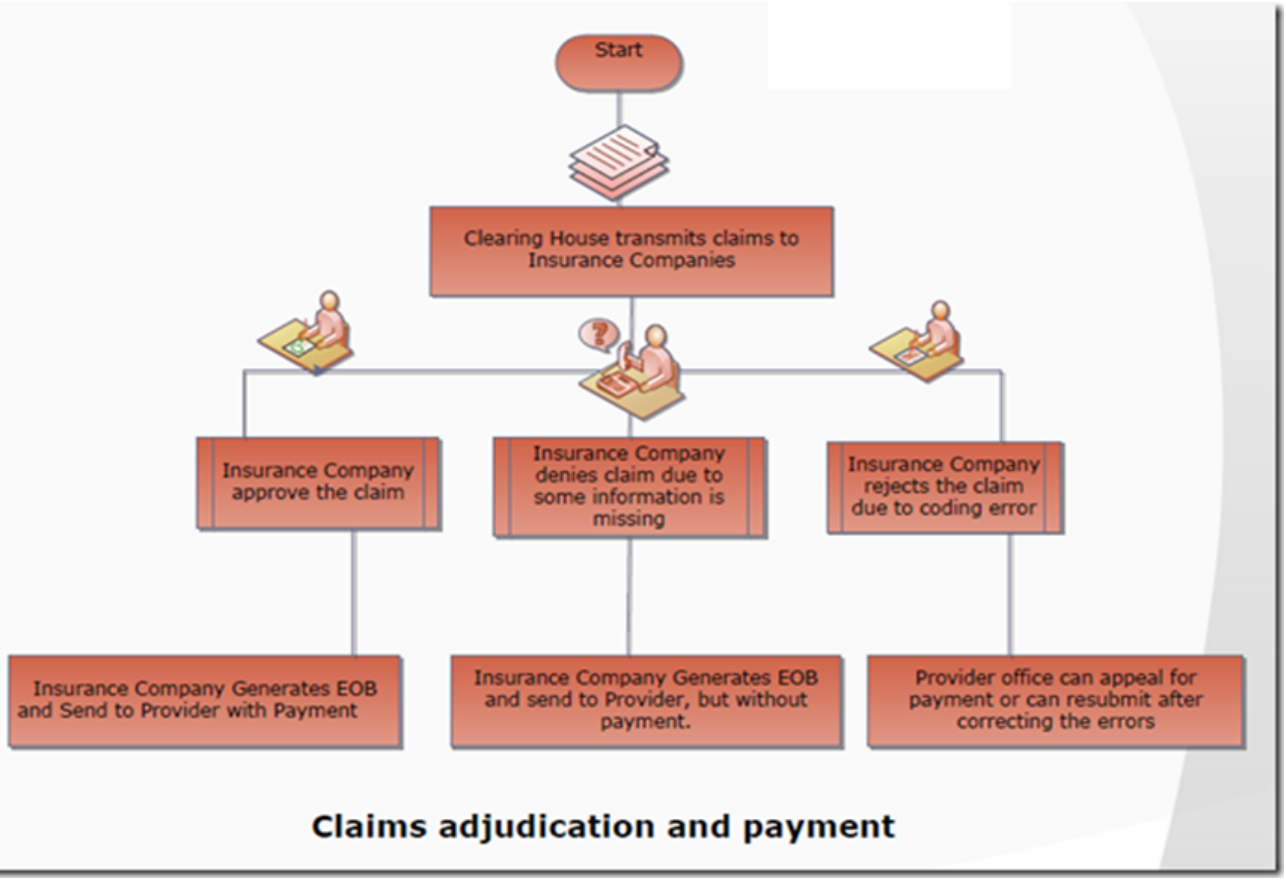
•If the claims pass validation, they are accepted and will be loaded into EDINET
•If the claims fail validation, they are rejected is not loaded into EDINET
•A 999 and 277CA response file is sent back whether the claim accepts or rejects

What is a clearinghouse?

Clearinghouses are essentially electronic stations or hubs that allow healthcare practices to transmit electronic claims to insurance carriers in a secure way that protects PHI, or protected health information.

Methods of Sending Claims (cont'd)

- **Clearinghouse**
  - Acts as an intermediary between provider and payer
  - **Reformats** data from provider **to a form** accepted by the payer
  - **Charges fee** for service
  - **Performs edits**
    - Checks claim for **missing or incorrect data**
    - Creates **audit/edit** ***report for provider***
      - **Lists errors and sends claim back for correction** ***(dirty claims)***



Claims adjudication and payment

A Division of Anthem

Government Business Division (GBD)
•Medicaid
•Medicare
•MedSupp
•Dual(MMP)

What is Medicaid?

Medicaid in the United States is a joint federal and state program that helps with medical costs for some people with limited income and resources. Medicaid also offers benefits not normally covered by Medicare, like nursing home care and personal care services. The Health Insurance Association of America describes Medicaid as "a government insurance program for persons of all ages whose income and resources are insufficient to pay for health care." Medicaid is the largest source of funding for medical and health-related services for people with low income in the United States, providing free health insurance to 74 million low-income and disabled people as of 2017.

What is Medicare?

Medicare is a national health insurance program in the United States, begun in 1966 under the Social Security Administration and now administered by the Centers for Medicare and Medicaid Services. It provides health insurance for Americans aged 65 and older. It also provides health insurance to younger people with some disability status as determined by the Social Security Administration, as well as people with end stage renal disease and amyotrophic lateral sclerosis.

What is MedSupp?

A Medicare Supplement Insurance (Medigap) policy helps pay some of the health care costs that Original Medicare doesn't cover, like:
•Copayments
•Coinsurance
•Deductibles
•Must have Medicare Part A (Hospital) and Part B (Medical)
•Different from Medicare Advantage Plan
•Sponsored through a private insurance company
•Paid through monthly premium in addition to the monthly Part B premium

What is an Encounter?

In a capitated payment system, unlike fee-for-service, the Medicaid program does not pay providers directly for services to beneficiaries. Instead, the Medicaid agency pays managed care organizations (MCOs) a monthly capitation payment for each beneficiary enrolled in each MCO. The MCOs then pay

providers for services delivered to Medicaid enrollees. Depending on the terms of the contract between the MCO and the provider, a MCO may pay the provider for these services through fee-for-service or through capitation. In this type of payment system the MCO is responsible for providing the Medicaid

agency with encounter data, which is comparable to claims data, that details the specific services provided to an enrollee by a provider.

What is Capitation?

Capitation refers to a form of a healthcare payment system. In a capitation model, a health care provider or individual hospital is paid by the insurer (or another payer) a fixed amount per patient during a given period of time.

Example: Provider is paid $500,000 per year to care for 1000 patients at $500 per patient.

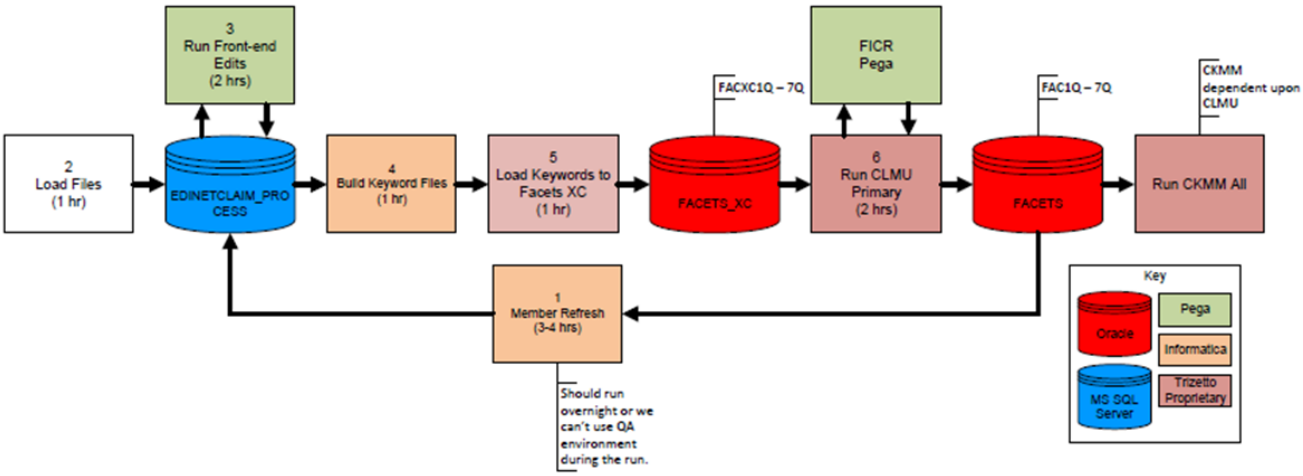
If the patient utilizes $2000 worth of health care services, the doctor would lose $1500. If the patient only used $10, the doctor profits $490.

Fee For Service

A method in which doctors and other health care providers are paid for each service performed. Examples of services include tests and office visits.

Capitation	Fee-for-Service	Discounted Fee-for-Service
•Have incentive to contain costs	•Less financial risk	•Only at risk if the cost of their care is greater than the payment from the health plan
•Incentive to provide more preventive care to keep patients healthy and limit the number of office visits	•Incentive to increase the number of services they provide during an office visit because health plan pays for every test and procedure	•Slight incentive to balance the effectiveness of treatment with the cost.
•There is a financial risk		
•Cannot ask for extra payments		

GBD IT Claims Loading Flow



What is the difference between EDINETCLAIM and EDINETCLAIM_PROCESS?

EDINETCLAIM_PROCESS is the staging area for the new inbound claims. At the end of day, the claims are transferred from the EDINETCLAIM_PROCESS database to the EDINETCLAIM database.

What is CLAIM_RULE?

This database houses most of the reference data that is used for the front-end business validation

•Member and provider data from Facets
•Provider data from SAPI
•Code reference data like NPI, NDC, CLIA
•Most of these tables are refreshed nightly after claims processing has completed

Also includes configuration tables that are used in CIRT and legacy Controller logic

•Market Config table
•Provider Selection XWALK
•These tables are updated through the CNR process

How is PEGA used in the new day processing?

•Loads the 837 data to EDINETCLAIM_PROCESS

•Runs the Rules Engine

•Runs the Controller where the member and provider selection occurs

Type of Bill Codes for the UB-04

Type of bill codes are three-digit codes located on the UB-04 claim form that describe the type of bill a provider is submitting to a payer, such as Medicaid or an insurance company. Each digit has a specific purpose and is required on all UB-04 claims

First Digit (Facility Type) + Second Digit (Bill Type Code) + Third Digit (Frequency)

Type of Bill Codes for the UB-04

Facility Type	Bill Type Code	Frequency

1 - Hospital 2 - Skilled Nursing 3 - Home Health 4 - Religious Nonmedical Health Care Facility (Hospital) 5 - Religious Nonmedical Health Care Facility (Extended Care) 7 - Clinic 8 - Specialty Facility, Hospital ASC Surgery	If the first digit is 1-5, then the second digit is: 1 - Inpatient (Medicare Part A) 2 - Inpatient (Medicare Part B) 3 - Outpatient 4 - Other (Medicare Part B) 5 - Level I Intermediate Care 6 - Level II Intermediate Care 7 - Subacute Inpatient (for use with Revenue Code 019X) 8 - Swing Bed	0 - Nonpayment or Zero Claims 1 - Admit Through Discharge Claim 2 - Interim (First Claim) 3 - Interim (Continuing Claims) 4 - Interim (Last Claim) 5 - Late Charge Only 7 - Replacement of Prior Claim or Corrected Claim 8 - Void or Cancel of a Prior Claim 9 - Final Claim for a Home Health PPS Episode

Facility Type	Bill Type Code
1 - Hospital 2 - Skilled Nursing 3 - Home Health 4 - Religious Nonmedical Health Care Facility (Hospital) 5 - Religious Nonmedical Health Care Facility (Extended Care) 7 - Clinic 8 - Specialty Facility, Hospital ASC Surgery	If the first digit is 1-5, then the second digit is: 1 - Inpatient (Medicare Part A) 2 - Inpatient (Medicare Part B) 3 - Outpatient 4 - Other (Medicare Part B) 5 - Level I Intermediate Care 6 - Level II Intermediate Care 7 - Subacute Inpatient (for use with Revenue Code 019X) 8 - Swing Bed

Type of Bill Codes Examples

Facility Type	Bill Type Code	Frequency
1 - Hospital 2 - Skilled Nursing 3 - Home Health 4 - Religious Nonmedical Health Care Facility (Hospital) 5 - Religious Nonmedical Health Care Facility (Extended Care) 7 - Clinic 8 - Specialty Facility, Hospital ASC Surgery	If the first digit is 1-5, then the second digit is: 1 - Inpatient (Medicare Part A) 2 - Inpatient (Medicare Part B) 3 - Outpatient 4 - Other (Medicare Part B) 5 - Level I Intermediate Care 6 - Level II Intermediate Care 7 - Subacute Inpatient (for use with Revenue Code 019X) 8 - Swing Bed	0 - Nonpayment or Zero Claims 1 - Admit Through Discharge Claim 2 - Interim (First Claim) 3 - Interim (Continuing Claims) 4 - Interim (Last Claim) 5 - Late Charge Only 7 - Replacement of Prior Claim or Corrected Claim 8 - Void or Cancel of a Prior Claim 9 - Final Claim for a Home Health PPS Episode

Type of Bill Examples	
111	a Hospital Inpatient Claim indicating that the claim period covers admit through the patient's discharge.
117	a Hospital Inpatient Replacement or Corrected claim to a previously submitted hospital inpatient claim that has paid in order for the payer to reprocess the claim.
138	a Hospital Outpatient Void or Cancel of a Prior claim to a previously submitted hospital outpatient claim that has paid in order for the payer to recoup the payment made.
831	a Hospital Outpatient Surgery performed in an Ambulatory Surgical Center. For an outpatient surgery performed in a Hospital, the type of bill would be 131 instead of 831.

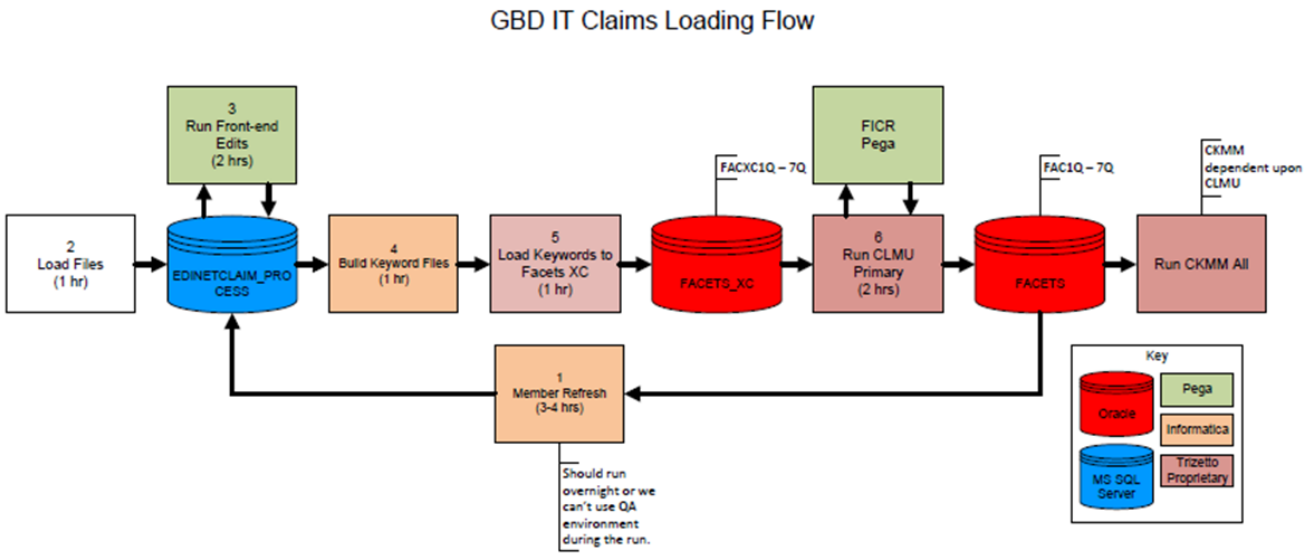
Codes on a Claim

CPT Codes	HCPCS Codes	Revenue Codes	ICD-10
Current Procedural Terminology	Healthcare Common Procedural Coding System		The International Statistical Classification of Diseases and Related Health Problems

• CPT codes are HCPCS Level I codes • Used to describe medical services	• HCPCS have multiple level • HIPAA requires the use of HCPCS Code • Overseen by CMS • Required when billing Medicare or Medicaid	4-digit numbers that are used on hospital bills to tell the insurance companies either where the patient was when they received treatment (i.e. hospital beds, nursing facility, lab, radiology, ER, etc.), or what type of item a patient might have received as a patient. Note: the data type has to be a string because the code begins with a zero.	Diagnosis Codes

Some services require a combination of the revenue with the CPT/HCPCS code

"I'm recommending quadruple bypass surgery. Your insurance company is recommending you take an aspirin every day with your cheeseburgers and pizza."



What is keyword?

It is a flat file generated by ETL process written in Informatica that has information submitted on the claim in the external claims format.

What is XC00?

This job will load a file in the external claim format (keyword) to Facets XC database.

When the claims are loaded into the database, they will have a FACETS_XC.CMC_CLCL_CLAIM.clcl_cur_sts= '16'.

			Facets Env	
\\va01pstodfs003.corp.agp.ads\Apps\Facets	Dev, Prod, or QA	\TZG\Files	\FacetsEnv	\INBOUND\KWD\CLAIMS\INPUT

Facets XC00 Production Schedule

Tidal Job Names	Run Time
CLA002_1D00_XXXX_FACETS_XC_INCREMENTAL	M-F 10:30 AM
CLA002B_0010_FAC_XXXX_FA_ErCmcRunXc00	M-F 12:15 PM
CLA004A_1D00_XXXX_FACETS_XC_FINAL	M-S 7:30 PM

Performing a backout when XC00 fails

Tidal output:

Error Message

###

Description.....: At least one engine was not successful. Check additional logs for more information.

When XC00 fails:

Check the keyword file logs at:

\\agpcorp\apps\Facets\ (Prod, QA or Dev)\TZG\Files\FAC??\INBOUND\KWD\CLAIMS\OUTPUT

If you see a pair of .xc and .err files with your keyword name, then the issue is likely a problem with the keyword file.

Identifying the bad claim:

Open the .XC file and find the last claim checked. Search the keyword to find that bad claim. Fix or remove the bad claim.

Steps to run backout:

Make sure no files exists in the
•\\agpcorp\apps\Facets\ (Prod,QA or Dev)\TZG\Files\FAC??\INBOUND\KWD\CLAIMS\DEL_HISTORY
•\\agpcorp\apps\Facets\ (Prod,QA or Dev)\TZG\Files\FAC??\INBOUND\KWD\CLAIMS\ERROR

In the UTILITIES – AD HOC folder, request to run the backout

ErCmcRunEdid_XC BACKOUT EDID and include the line --RestartStep=5000

When the backout completes, kick off the XC00 again.

What is CLMU?

The process of paying or denying claims loaded in Facets XC against the benefit or coverage requirements. The claims will be loaded to the Facets database if they are successfully processed by CLMU.

FACETS_XC.CMC_CLCL_CLAIM.clcl_cur_sts				FACETS.CMC_CLCL_CLAIM.clcl_cur_sts	
16	Unprocessed by CLMU			15	Claim Pended
15	Errored in XC			1	Claim Adjudicated/Ready for Payment
99	Successfully processed by CLMU			2	Payment Process via CKMM
				91	Voided

CLA015_1W00_FACETS_CLMU_WEEKEND	Weekends 7:00 PM

What is CLEU?

The process of paying or denying encounter claims loaded in Facets XC against the benefit or coverage requirements.

Facets CLMU Production Schedule

Tidal Job Names	Run Times

CLA005_0028_FAC_TxXX_FA_ErCmcRunCLEU	M-F 6:45 PM

Common Reasons Why Claims Deny

•Treatment sought without prior authorization
•Improper claim filing (missing information, illegibility)
•Claims not filed within time limits
•Treatment not covered by policy
•-Procedure deemed medically unnecessary

Pended Claims (clcl_cur_sts = 11,15)

The business has configuration set up in Facets to pend claims for further evaluation. In production, these pended claims are loaded into the Macess queues via DocFlo and they are manually worked by the claims analysts in order to get the claim to '01' (ready for payment) status.

What is CKMM?

Facets Claims Payment to Providers Process

Facets CKMM Production Schedule

Tidal Job Names	Run Times

CLA011_1W00_FACETS_CKMM_PDPD_REQUEST	Thursday

How to Kill a Facets Job?

Aborting a job from Tidal will not kill the Facets process. You must run the KILL FACETS JOB from the Tidal UTILITIES AD-HOC folder.

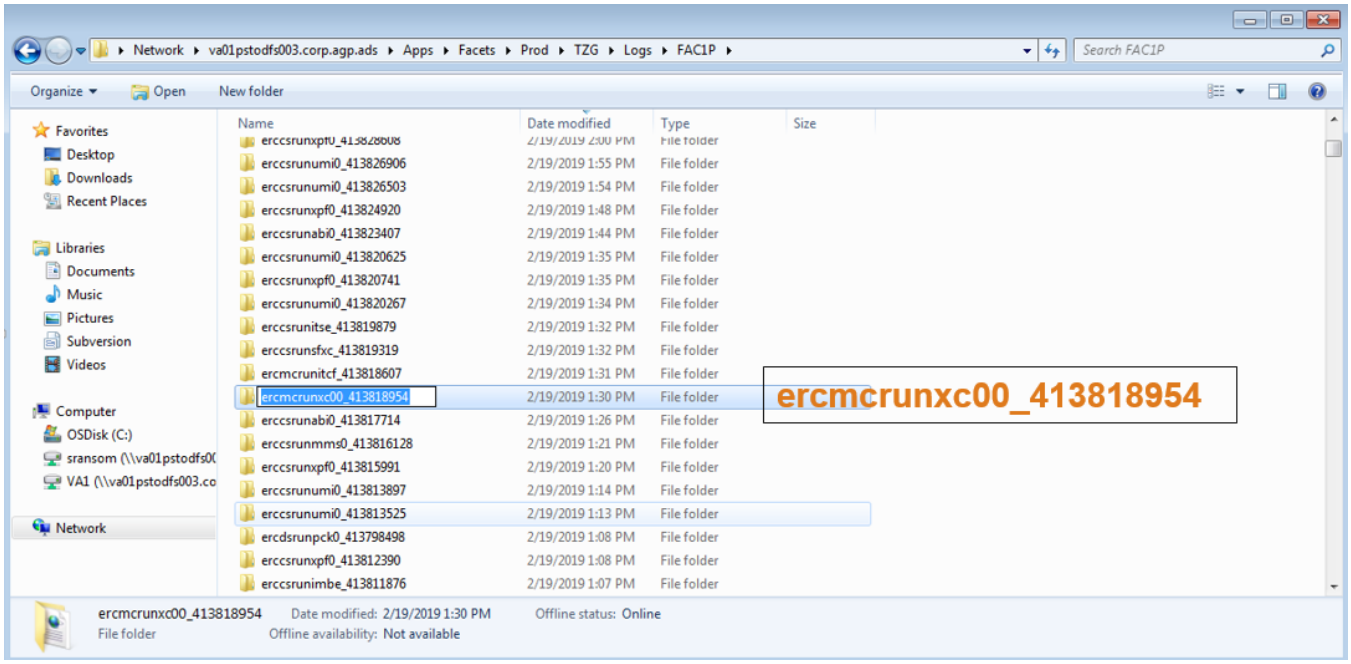
First you need to locate your job and retrieve the folder id:

\\va01pstodfs003.corp.agp.ads\Apps\Facets\Prod\TZG\Logs\FAC1P

Update the Facets environment in the above path

BECAUSE OF A TRIZETTO UPDATE, the kill job can only be performed by the DBA. Providing the instructions just in case this capability is returned.

Capture the folder name:



How to Kill a Facets Job?

Job Definition [KILL FACETS JOBS FAC1P[\UTILITIES - AD HOC]]
